M3 (ARTIFICIAL LUT calibration, not an upstream CVE): message-zero vs message-ones, LUT mechanism on vs off

The two arms are separate builds (platform-m3-lut-on vs platform-m3-lut-off). M3 is a constructed calibration. Family m3_lut_arm_end_to_end_v1, m = 6, alpha_eff = 0.05/6.

panels (a) and (b) use INDEPENDENT y-scales: the arm-to-arm level offset is a build difference, not the tested effect. The tested effect is the within-arm class0 - class1 difference, shown in panel (c).
